DETAILED ACTION

Allowable Subject Matter

Claims 1, 3-12, 21-22 are allowed.

Claims 1, 3-12, 21-22 are allowable over the prior art of record for at least the reason that even though the prior art discloses an electro-absorption modulator device, modeled as a shunt capacitance in series with inductances due to input and output microstrip lines, wherein the values of the various impedances are calculated so that the characteristic impedance of the device is matched to a target source impedance at the target frequency, the prior art fails to teach or reasonably suggest a device comprising an input bonding pad and an output bonding pad each having a respective length less than one quarter of a target wavelength corresponding to a target operating frequency, a respective characteristic impedance less than a target source impedance, and a respective reactive impedance that is capacitive up to at least the target operating frequency, wherein the input bonding pad, the output bonding pad, the input microstrip line, the output microstrip line, and the electro-absorption modulator have an equivalent circuit having a characteristic impedance matching the target source impedance at the target operating frequency, as set forth by the claimed combination.
